

MEETING NOTES FOR 02/09/25

We ran out of RAM on Google Colab to run the Deepseek Model, so we are trying to run it locally on our computers to avoid crashes like that.

1. Need to clean up our code and properly figure out how to implement the AI.
2. Clean data again (quick)
3. Ensuring results are correct
 - a. Through some empirical testing, the model seems to mistake right wing sentences for left wing.
 - b. Examples like I hate NIGGERS

Next meeting is 02/19
