Meeting Notes 02/21/25

Suggested changes to model:
+   Corpus Political Analysis Lexicon: allows us to work with prelabeled data
+   Vader:
     - We use this to classify multiple categories.
     - https://hex.tech/templates/sentiment-analysis/vader-sentiment-analysis/
     - Got Vader to load in, haven't tested it yet since the lexicon we used was still incompatible:
       - The lexicon was more on the emotional side than political, which is not what we're looking for.

Felix and Jonathan are working on Deepseek to try to get it to work locally where more processing power can be utilized.

Bottom Line: We still need to figure out which model is right for our analysis. Currently trying out VADER, and retrying Deepseek.
