Minutes

(Imma work on the formatting of our meeting minutes as we go on, also this one is hella short)

- Previously discussed issues preventing web scraping for some news outlets due to subscriptions and firewalls
- Observed success in other news outlets in finding the author of each article
    - Done by finding the author names imbedded within the article itself
- Replaced New York Times, Reuters, and Wall Street Journal with Breitbart, VOX and MSNBC
- Agreed to begin minutes process to maintain meeting organization
- Formatting of scraped data in google sheets looks funky, point to be considered if we want to switch to excel instead

Goals for next meeting

- Find new articles from revised news outlets to be scraped

Agenda for next meeting

1. Run new data through web scraper
2. Go through data cleaning process for all articles
3. Save both raw and cleaned data in repository
